

## Comparing types of data in overlapping areas

variable	GPS input	Bioassessment input
Canopy cover	Visual ranges (observed)	Densiometer #'s (empirical)
Bank Stability	Bank slope & vegetated vs bare	Observed bank stability on forms
Particle Size	In each size class (observed)	Epifaunal substrate & embeddedness (observed)
Seasonal water level	Water depth (empirical)	"Channel flow status" (observed)
Riparian structure	# trees & % vegetation ranges (empirical & observed)	Riparian width/human impact (observed)
